Nepal Case Study

Our Global Presence – Nepal Case Study

Background

MoH Nepal and its subsidiary health facilities used many methods and tools to maintain logistics data. Some of these were electronic tools while other health facilities remained offline and even used paper based reporting. This caused a long and considerable delay in preparing reports at regional and national levels causing delays in decision making.

Forecasting and supply planning was delayed considerably due to the delay and unavailability of the required data. Data collection was a critical problem for MoH Nepal.

In addition, these delays in data collection were causing wastage due to expiry of commodities.

USAID selected Bileeta Pvt Ltd, as the business partner to implement the proposed eLMIS project due to Entution Vesta eLMIS being considered as an effective solution to the requirements at hand.

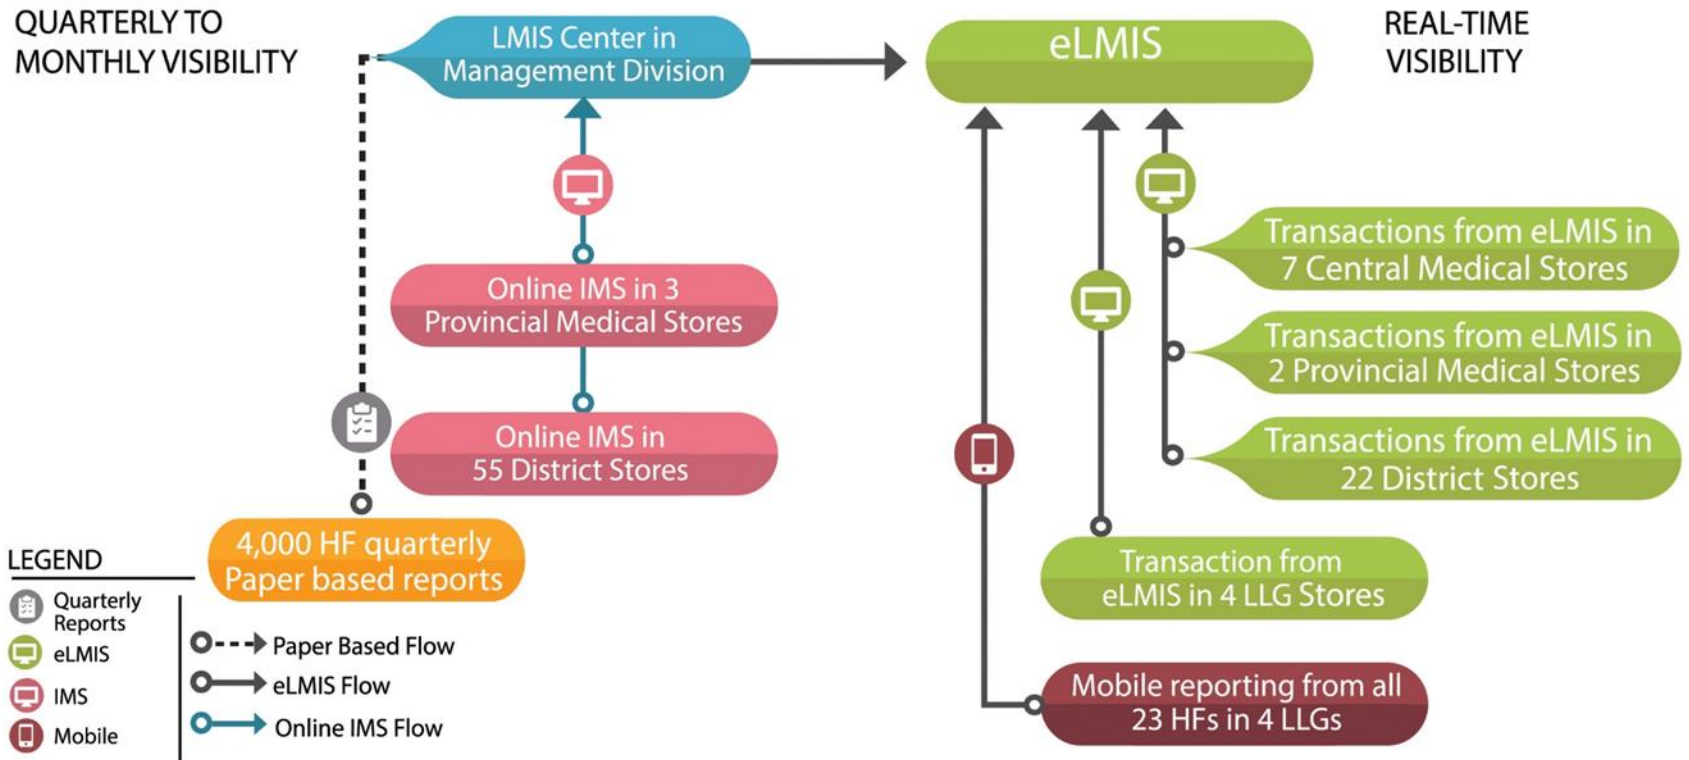

The Challenge

- To strengthen the logistics information system in order to increase access to data,
- To improve the capacity of Government of Nepal's (GON) supply chain management personnel and local institutions.
- To optimize the supply of health commodities to central / regional / local medical stores, through improvement of forecasting, quantification, distribution, procurement and other aspects of the supply chain.

The Results

- Strengthened of operations of the Health Facilities of Nepal under the purview of MOH.
- Fully integrated & cost-effective Logistics Management of Health Commodities across Nepal.
- Reduced lead time of exchanging health commodity data across the warehouses.
- Forecasting of stock requirements based on historical data - especially Stock Out visibility improved.
- Offline operation during interrupted internet connectivity and power supply through the Offline & Mobile applications.
- Strengthened work of health care commodities and services focusing on key public health priorities especially HIV/AIDS, malaria, and other basic health commodities.
- Widespread availability of management reports with greater visualization.
- Accurate monitoring of total order cycle time and order fulfilment leading to shortened order fulfilment times.
- Visibility of incoming shipments improved.
