

Entution Vesta

Electronic Logistics Management Information System (eLMIS)

Entution Vesta eLMIS

Entution Vesta eLMIS is a health-focused solution and the only fully compliant eLMIS globally. It combines powerful Supply Chain Management (SCM) functionalities with best-in-class data analytics to manage countries' entire health commodity operations. The main objective of the solution is to ensure the optimum level of stocks are maintained across all delivery points, avoiding overstocking of health commodities and eliminating any stock out situations and wastages.

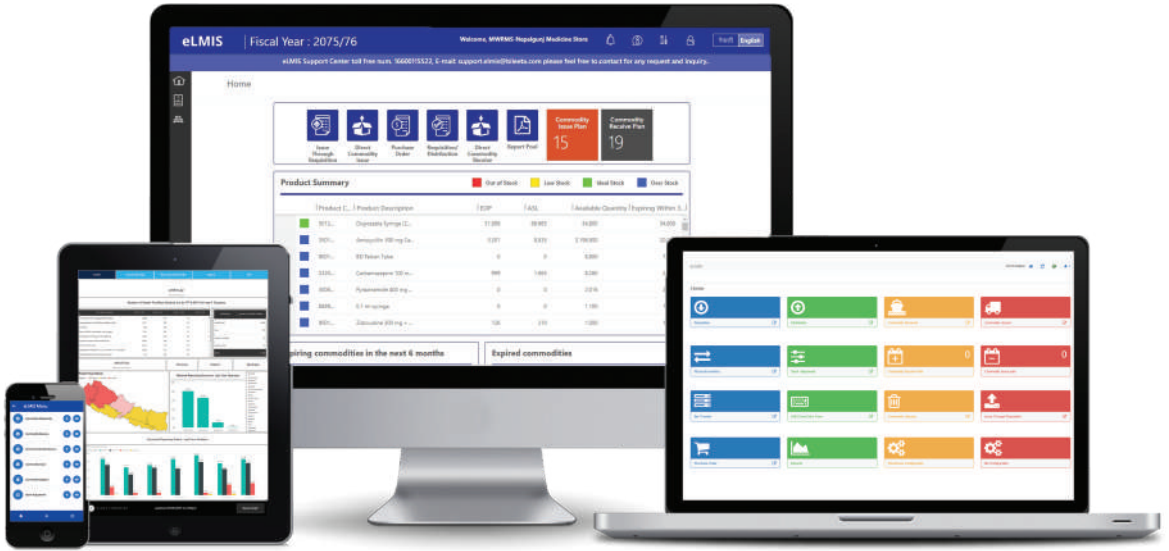

The solution adopts the supply chain management six logistics rights concept of the Right goods, the Right quantities, the Right quality, the Right time, Right place, at the Right cost.

It streamlines supply planning via forecasting, procurement, and distribution of health commodities across all levels of supply chain entities from central warehouses, regional warehouses, and district warehouses to service delivery points (SDPs) or health facilities.

Real-time tracking and alerting stakeholders on movements in the supply chain via multiple touchpoints and devices based on cloud and mobile technologies help an organization be well engaged and informed on supply chain operations. Integration with various IoT devices such as sensors and location trackers ensures real-time and relevant information. At the same time, advanced AI and decision support system provide actionable intelligence to stakeholders.

Why

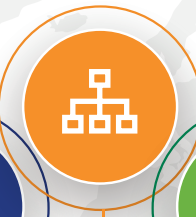

Greater Visibility
of the Operations.

Accurate, Faster &
Intuitive Reporting.

Better Health Operations
& Better World.

Intelligent Information
supports faster and
confident decisions.

Efficient Stock
Operations and
Management.

Seamless Integration
with other Information
Systems.

Intelligence Information

Accurate presentation of decision driven and intelligence information empowering easier and faster decisions.

Real-time Information

Support the real-time management of the health commodities throughout the supply chain.

360 View of Inventory

Greater visibility of key performance indicators to empower the operations; Geographical stock, Consumption levels, Stock availability, Forecast accuracy, Order accuracy, On-time delivery, Order fulfillment cycle time, Order fill rate, Inventory accuracy, Inventory turnover and remaining shelf life.

Operational Optimization

Optimize the flow of health commodity supply chain through forecasting, quantification, procuring and distribution.

Greater Visibility on KPIs

It enables 360 view of the revenue leakages. Inventory status in the country / organization.

Flexibility & Adoptability

Flexible solution with greater adoptability to country specific supply chain and logistics requirements, which could effectively supports the unique requirements of health ministries across the world.

Greater Control

Providing more insights & establishing greater controls over your operations, eliminating revenue leakages.

Efficient and effective

Facilitates an efficient and effective logistics planning and management across all levels of the supply chain.

Seamless Integration

Seamless Integration with other Information systems (Enterprise resource planning systems, Health information systems, Ordering systems etc.)

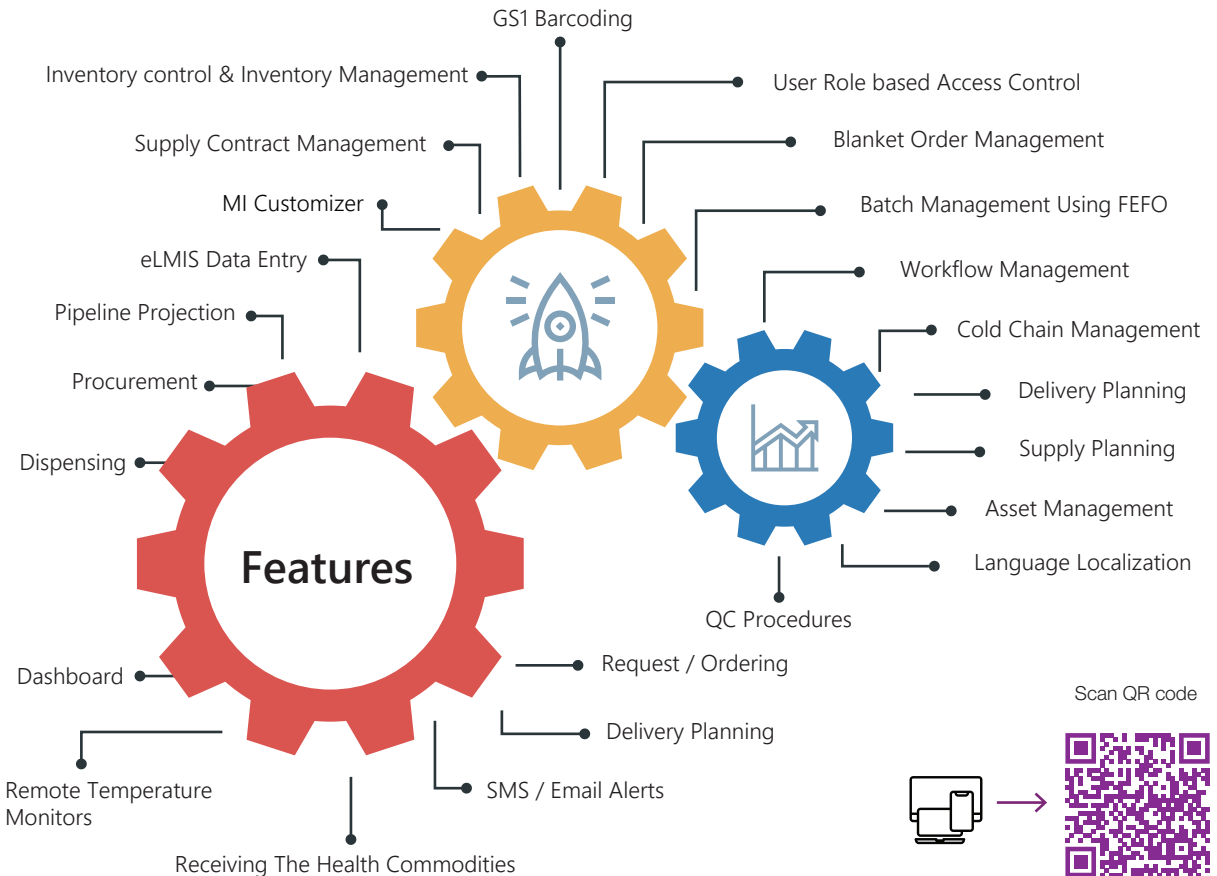

Core Applications

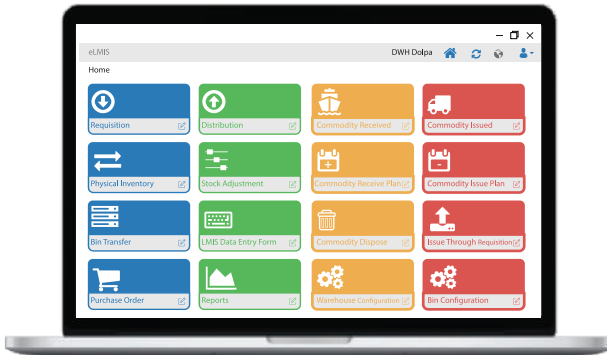

Online Web based Application

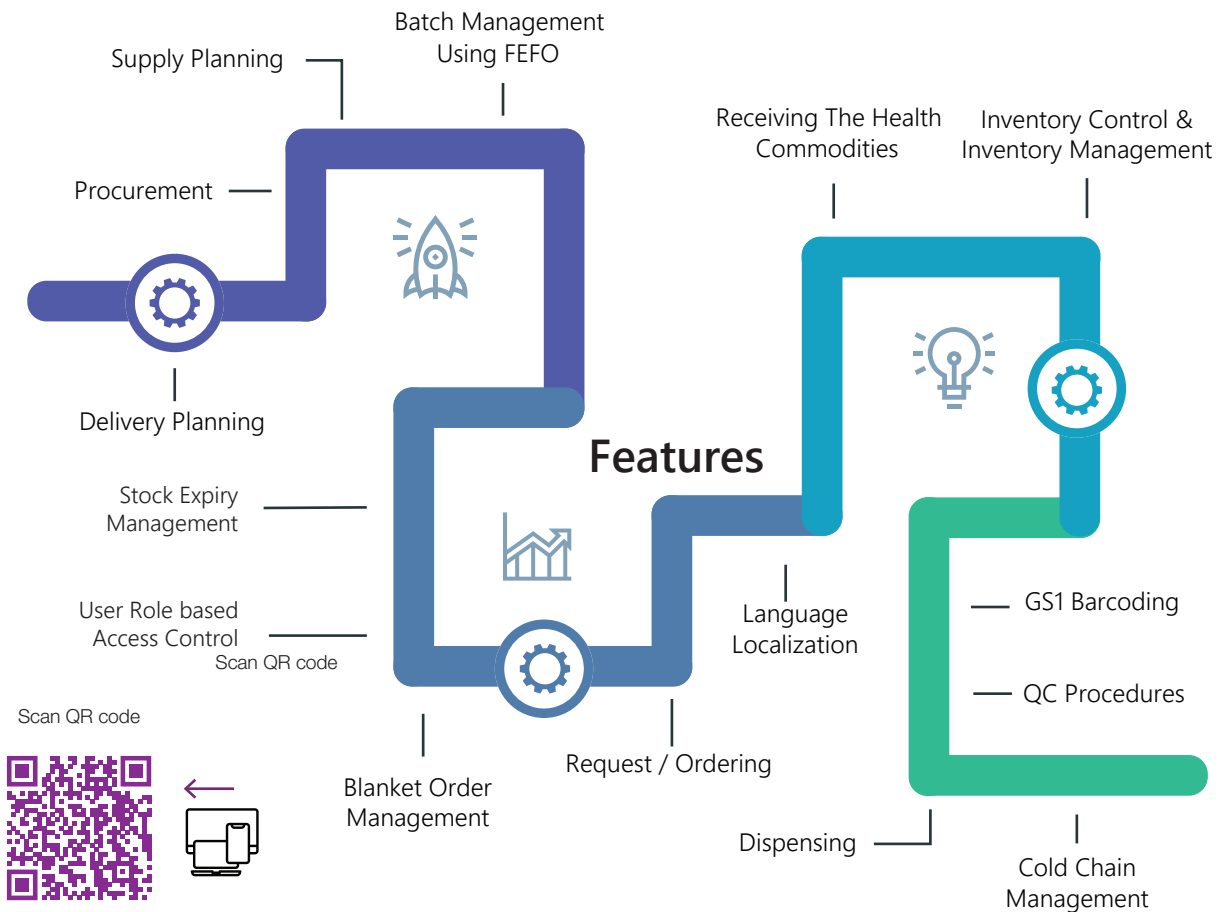

Entution co-backend is a cloud-enabled solution designed with extensive functionalities to cater to clients' requirements. This system architecture is designed to be hosted in a central location (Server) and its connected via Internet / VPN. So the user who has internet connectivity can access the solution to conduct real-time transactions and obtain reports.

Offline Application

This application is suitable for the remote locations which don't have internet connectivity for having poor connectivity. The solution is fully capable of working without internet connectivity where the data will be locally stored and synchronized when the internet is available. This module will also provide the essential reports for warehouse operation in offline mode.
